

MOBIADO UNVEILS THE PROFESSIONAL 105 EM CLB SERIES.

Vancouver, Canada – October 20th, 2008: Mobiado celebrates its heritage with the designer 105CLB series. Elegance in Mobility.

The 105CLB combines the engineering of the 105ZAF with the elegance of Mobiado's designer monogram. The entire front and back of the phone has been crafted from large pieces of sapphire crystal and printed from beneath with the silver Mobiado monogram, providing a modern minimalist look with a wear resistance second only to diamond. The 105CLB utilizes a unique and hidden sliding battery cover mechanism (patent pending) with the battery cover being made entirely from one piece of sapphire crystal. The phone frame is precision CNC machined from aircraft aluminum to create a strong yet light body, it is polished, and then anodized or nickel plated to produce a surface for the toughest of uses. The buttons and screws are beautifully machined and polished from stainless steel. The iconic Mobiado 105CLB is available in two designer styles (black and silver). Once you hold one, you will never want to let it go.

The 105CLB is unlocked, quad-band GSM/EGSM and dual-band WCDMA network operational. They work within North America, Europe, Africa, Asia- Pacific, and South America where GSM/EGSM 850/900/1800/1900 and WCDMA 850/2100 networks are available. They are equipped with a 2 megapixel camera and video camera, more than 1 GB internal memory, 2" display with up to 16 million colors, Bluetooth and micro USB connectivity, and a music player that supports AAC, eAAC+, and MP3 audio formats.
